

Rechargeable flashlight Patrol, 600 lm

Flashlight with two switches and a docking cradle.

Product code: MX255L-RC

Specification:

Charging time:	4 - 6 h
Operation time:	100% 1,5h, 50% 4,5h, 10% 12h; Strobe 2,5h
emergency and warning light function:	✓
Material:	aircraft grade aluminium
Light output:	600 lm
Docking cradle:	✓
Operation modes:	100%, 50%, 10%, strobo
Weight:	170 g
Switch:	✓
tactical switch:	✓
Waterproof:	IPX8
Shockproof:	1,5 m
Dimensions:	183 mm x Ø 47/31 mm
Light Distance:	245 m
Power supply:	100-240 V AC, 18650 3,7 V, 2200 mAh Li-Ion
Light source:	CREE XM-L LED
UP Light output:	600 lm
UP Light source:	CREE XM-L LED
UP Power supply:	100-240 V AC, 18650 3,7 V, 2200 mAh Li-Ion
UP Operation time:	1,5 h

Product description

Medium size flashlight, designed specifically for professionals.

Each flashlight has a unique serial number. The flashlight is extremely robust, has a reinforced housing and is made from high grade aircraft aluminum.

The flashlight's handle is coated with special rubber to ensure safe grip, especially in very low and high temperatures.

The PATROL is dedicated for service in difficult conditions. The flashlight is resistant to shocks, features a break-proof and scratch-proof polycarbonate lens (Lexan) and is water-proof, boasting respectable protection class IPX8.

In comparison to the previous models of this line, this unit's innovative features followed two directions. On one hand, the flashlight's utility parameters were improved, such as the 600 lm light output and the waterproof class, and on the other hand the shape of the head was altered. Thanks to the new, more svelte head, PATROL perfectly fits the holster, and there is a special ring in the bottom part of the head, to prevent accidental rolling of the flashlight.

MX255L-RC has two, interchangeable switches: the standard switch in the grip, and a tactical switch in the back.

4 operating modes: 100%, 50%, 10% and Strobo can be selected by switching the flashlight of and on. The Strobo mode can be also switched on from any other mode, simply by depressing the switch for 2 seconds.

The flashlight is charged through a special charging stand (included). The stand has a wall mounting fixture and emergency light function - 6 LEDs light up if the mains is defective, which makes it much easier to locate the flashlight in darkness.

The kit includes: a charging stand, 12V DC charging cable (for connecting to car cabin socket), 230V AC main cable, a battery.

Additionally you can buy a holster and a signal overlay.
